

From what you've read and heard, is there solid evidence that the average temperature on earth has been getting warmer over the past few decades, or not? **(If yes, ask:)** Do you believe that the earth is getting warmer mostly because of human activity such as burning fossil fuels, OR mostly because of natural patterns in the earth's environment (options rotated)?

In your view, is global warming a very serious problem, somewhat serious, not too serious, or not a problem?
